

Medical Gas Distribution System

GREETINGS

Medical engineering and biotechnology will lead the 21st Century.

Especially medical equipment business has rapidly on growth by an improved income level, an aging society and a continued welfare policy of government.

Medimaxkorea is the Korea's leading manufacturer of medical gas equipments including medical air compressor, medical vacuum pumps, manifolds, liquid oxygen storage tank system, pipeline components, bed head trucking system (bed head unit, console), pendants, ceiling column, flowmeter with humidifier, suction, secondary and accessory.

Through abundant solid experience and with enjoying benefits with our overseas distributors, Medimaxkorea sell its products through a global distribution channel to be the World's leading manufacturer.

Medimaxkorea is dedicated to manufacturing and developing the most advanced medical gas equipment and prides itself in providing the most technologically advanced products in the marketplace with CE mark obtained and ISO 13485:2003 approved.

Thank you very much for your continued interests heartily.

Youngkeun Choi / President

Medical Gas Distribution System

Medical Gas Distribution System is a central supply system to supply a depressurized medical gas (O₂, N₂O, N₂), medical air, and medical vacuum to each ward of hospital safely and conveniently through a central supply piping from medical gas supply sources installed at machinery room.

In medical equipment, medical gas is always supplied to patients. Its supply stop for a while has an effect on a patient menace of life so that medical gas system always should be not only supplied safely and confirmly without blocking but also kept with a good quality of medical circumstances and as a result medical gas system should be one of the best important hospital equipments.

Generally medical gas equipments consist of supplying equipments, outlets equipments, secondary and general piping method has been mostly used with copper tube "L" type and "K" type.

An evaluation for advanced medical equipment is a little differences as the standard and we know well that medical gas system is also a base among medical equipments for customer satisfaction and to keep good medical quality. Also to embody a medical environment easily and conveniently to hospital staff and patient is to raise hospital property of future value under high quality of medical service.

As medical gas system like this is an indispensable hospital equipment, its plan and expense should be reviewed and accomplished in advance before installation.

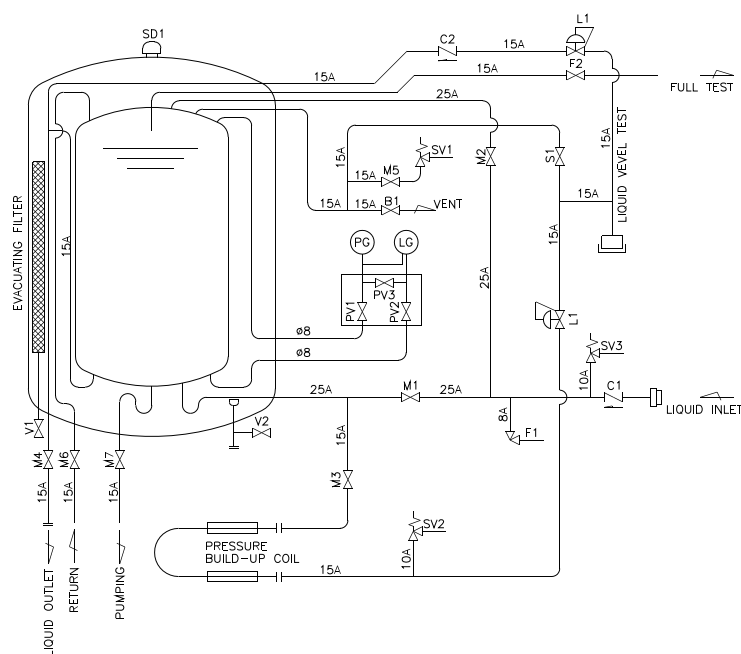

Description

A photograph of a water treatment facility. In the foreground, a large white cylindrical storage tank stands next to a rectangular clarifier unit with a metal grate on top. The area is enclosed by a chain-link fence. In the background, there is a park with a paved path, a wooden pavilion, and a multi-story apartment building on a hillside.

- * Long-term hold time due to highly efficient multi-layer insulation systems
- * Economizer system
- * Built-in isolation valve
- * Built-in Vaporizer
- * The vent module has a dual safety valve and manual vent valve

(Above specification can be changeable.)

Medical Gas Manifold System

Description

Medical gas manifold system is designed to provide high gas flows while requiring minimal maintenance. It is intended for use in applications that require an interrupted flow of gas without fluctuating line pressure. Medical gas manifold system is available two kinds of standard model, one is fully automatic change over system, the other is semi-automatic change over system. Each specifically designed for its gas service according to ISO13485 and NFPA99. The gas offer : Oxygen, Nitrous oxide, Compressed air, Nitrogen, may be ordered as special items.

Semi-Automatic Manual Change-over Type

Feature

- * Max. Flow : 140 Nm³/hr
- * Outlet pressure :
Oxygen / Nitrous-Oxide / Air : 3.5 ~ 4.5 Kg/Cm²
Nitrogen : 7 ~ 10 Kg/Cm²
- * Dual Line pressure regulator
- * High pressure regulator
- * Cost effective
- * Easy to maintenance and installation
- * Manual device manifold is also available on request.

MMK - MF - OXY - S - HxHx

Gas Code	Gas Type and Q'ty
OXY = Oxygen	H = High Pressure
N2O = Nitrous Oxide	L = Liquid
AIR = Medical air	x = Cylinder Q'ty
NIT = Nitrogen	A = Fully Automatic Change-over
CO2 = Carbon Dioxide	S = Semi Automatic Change-over

MMK - MF - OXY - S - H8H8

Flexible Type Pigtail

Copper Tube Type Pigtail

Medical Air Compressor System

Description

It's system that makes and supplies a clean medical axenic air which compressed air created by air compressor has passed air dryer filter to remove moisture, dust and bacteria. It uses for driving a respirator, for regulating oxygen density, for removing foreign substance of operating instruments and for driving air drill of dental surgery.

Especially in giving a long-term oxygen to a serious case, it's system that supplies a clean medical air through outlets with oxygen from a central machinery room

Feature

- * Operation with minimized noise and vibration owing to precious processing
- * Adoption of high-precision bearing
- * Minimized maintenance cost
- * Compact and elegant structure
- * High-efficiency intercooler

Construction

2 - Oil Free Air Compressor / 1 - Receiver Tank / 1 - After Cooler / 1 - Air Dryer

Medical Vacuum Pump System

Water Sealed Liquid Ring Type

Description

It's system that makes vacuum pressure to remove foreign substance in the patient body and vacuum pressure keeps 0 ~ 740mmHg from air inlet connected in a line through piping

In lots of use amount at the same time, duplex system operates simultaneously and timer adheres mostly to reduce arrival time to normal pressure.

Feature

- * Suitable for the exhaust of gas containing vapor or moisture
- * Conduct the best capability in low pressure
- * High quality performance
- * Working smoothly without any noise
- * No vibration

Construction

- 2 - Vacuum Pump
- 1 - Receiver Tank
- 1 - Separator Tank
- 1 - Automatic Water Supply / Drain System
- 1 - Control Panel
- 1 - W / Standard Accessories

Medical Vacuum Pump System

Oil Sealed Type & Oil Free Dry Type

Description

Oil sealed rotary vane vacuum systems are available in a multitude of configurations Simplex tank mount, Duplex tank mount, as well as Triplex, and Quadruplex stack mount system The system shall include interconnecting piping and wiring to provide a functional operating package with applicable electrical and plumbing connections at the installation site. The packaged unit shall be factory assembled, tested, painted and crated prior to shipment.

Normal Operation Vacuum

- Oil Sealed Rotary Vane Pump System
Set at 550 ~ 700mmHg
- Dry Rotary Vane Pump System :
Set at 400 ~ 500mmHg

Standard Equipments

- WOVP or WVS series Rotary Vane Pump(s)
- Tank receiver
- Electrical control panel
- Integral Piping and Wireings
- Vacuum gauge and Vacuum Control switch
- Inlet air filter, Manual drain valve,
- Check valve & Pump isolation valve
- Three way solenoid valve (Optional)

Medical Gas Alarm System

Analog Display Type

Gauge display type alarm system is wall mounted unit the gas gauge monitor in up to six gases pipe line and sound alarm wire to a printed circuit board located on the rough-in assembly. Each add-on module can be programmed to provide specific information, based on the medical facility's needs.

Master Alarm

With monitoring ags flow totally and partly, it's system that monitors to take prompt action of unexpected situation with ringing a bell abnormal at a special area.

Generally master alarm installing in central control room is system to monitor an operating sound against malfunction of gas supply system. compressed air and vacuum pump, gaseous exhaustion, malfuction of machines by over electric current and so on,.

MMK-MA-WCA-ONAV2

Gas Code
O = OXYGEN
N = NITROUS OXIDE
A = MEDICAL AIR
V = VACUUM
2 = NITROGEN
C = CARBON DIOXIDE

Feature

- * Six alarm signal in one module
- * Programmable solid red of flashing green indicator (led lamp)
- * Audible and gauge visual alarm
- * Easily tested
- * Easily installed
- * Modular design

Area Alarm

With monitoring agas flow totally and partly, it's system that monitors to take prompt action on unexpected situation with ringing a bell against abnormal pressure at a special area.

Area alarm installs at each floor of corridor and nurse call station of important departents like ER, ICU, and OR and monitors an abnormal pressure ans so on.

MMK-AA-WCA-ONAV2

MMK-AA-WCA-OAV

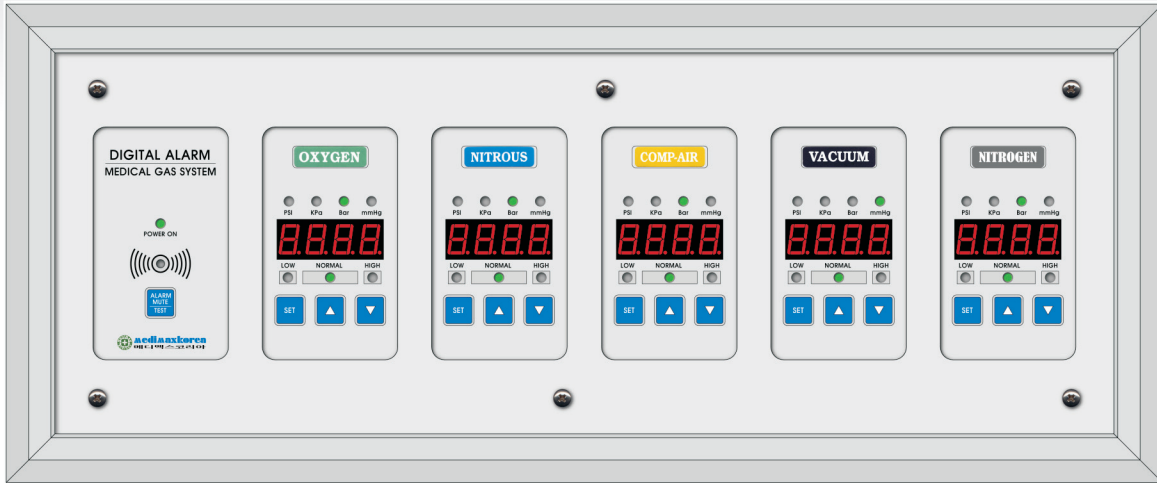

MMK-AA-WCA-OV

Medical Gas Alarm System

Digital Display Type

Our digital display type alarm system is the integrated system in the function of master alarm to monitor abnormal pressure signal totally in gas manifold, air compressor, vacuum pump and in the function of area alarm to monitor abnormal sectional pressure signal in ER, ICU, OR, which improved the installation and management convenience in usage, too.

MMK-AA-WCD-ONAV2 / MMK-MA-WCD-ONAV2

Feature

- * Through entry port of compartmental pressure signal, master alarm module and area alarm module are used together.
- * For each of display and each of sensor module, each of micro process is attached.
- * Board stability improved, as separating board and unit with changing AC220V into DC12V.
- * With adjusting dip switch, display pressure unit is chosen with 4 methods of psi, Kpa, Bar, mmHg
- * Safe output under the minimum noise and $\pm 0.25\%$ high precision pressure sensor used.
- * With one of 485 communication circuit to transmit the maximum 1,500m, communicated between 30 pcs of modules.

Construction

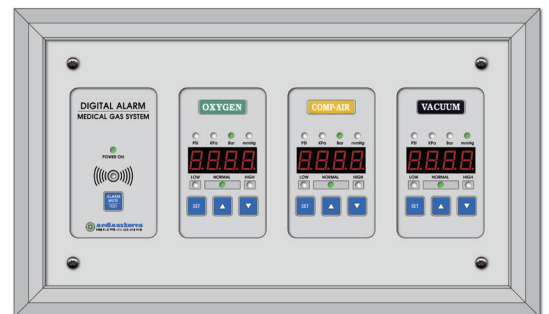

- * Box : Steel 1.2t baked painting
- * Panel : Aluminium 1.6t hair line finished
- * Buzzer board : Power on LED / Alarm mute & Test button / buzzer
- * Display board : Display FND / SET button / Up, Down button / Low, Normal, High LED / Units Display LED
- * Pressure Transmitter : ACCURACY $\pm 5\%$ [non-linearity repeatability, hysteresis]

Nitrogen Control Panel

Description

N₂ has been used to drive turbo surgical instruments in orthopedic surgery and plastic surgery. This system is to adjust a pressure of the N₂ properly and it has generally concealed in the wall of OR and small OR.

Diss Type

MMK - NC - DIWC

Schrader Type

MMK - NC - SHWC

MMK - NC - SHWC

Outlet Type

SH = Schrader Type
DI = DISS Type

Mounting Type

WC = Wall Concealed
WR = Wall Revealed

Construction

- * Supply pressure gauge : 30Kg/Cm²
- * Outlet pressure gauge : 15Kg/Cm²
- * Pressure regulator : 0 ~ 10Kg/Cm²
- * Outlet valve
- * Shut-off valve
- * All outlet are 100% factory tested to be free
- * Box : Steel 1.2t baked painting
- * Panel : Steel 1.2t baked painting w/color printed p.p sheet coating

Excess Gas Purger

Description

It's system in the wall of OR that forces to exhaust unnecessarily excess anesthetic gas outside by air purging system abandoned from anesthetic machine in operation.

Construction

- * Box : Steel 1.2t baked painting
- * Panel : Steel 1.2t hair line finished
- * Inlet excess anesthetic gas & adaptor
- * When gas in-out, including light-on

MMK - PU - EX1

Ceiling Outlet Spring Hose Type

Description

In using medical gas, this system is a basic ceiling outlet system that outlets of medical gas have been installed in ceiling of OR, Delivery Room and Premature Room which is hard wards to install outlets in the side wall. In using it, with pulling hose down and connecting adapter, it's system to come back to an original place by spring under releasing hose.

Construction

- * Ceiling cover : color coded aluminium
- * Hoe : 8 feet long gum ruber
- * Shut-off valve
- * Retractable wire or spring type
- * Quick connect check valve
- * Gas : Oxygen
Nitrous-oxide
Medical-Air
Vacum (Suction)

Ceiling Outlet Hose Reel Box Type

"xx" Ceiling Type	"yy" Gas Outlet Type	Gas Name
SH = Spring Hose Type	PI = Pin Index Twist	O = Oxygen
RH = Reel Hose Type	OH = OHMEDA	N = Nitrous Oxide
RB = Hose Reel Box Type	OX = OXEQUIP	A = Medical Air
		V = Vacuum
		C = Carbon Dioxide

Description

It's system that outlets of medical gas have been installed in ceiling of OR, Delivery Room and Premature Room which is hard wards to install outlets in the side wall. This system is for Rim Drum method that in using it, if pull it down and stop it, it stops at that place and after using it, if pull it down again, it stops to comp up over our tall. As a proper height of outlet has been adusted by place of gas using, it's more convenient than hose outlet type of wire and spring. And its length can be adjustable to about 4 meter

Construction

- * Ceiling cover : color coded aluminium
- * Hoe : 15 feet long gum rubber
- * Retractable hose reel w/auto lock device
- * Quick connect check valve w/dust cover
- * Gas : Oxygen / Nitrous-oxide / Medical-Air /
Vacum (Suction) / Evacuation

Description

It's system to supply medical gas and sources of electricity through column attached receptacle and check valve and installed and the column moves up and down and fixes to concrete roof in the ceiling of OR.

Type

- * Vacuum powerd retractable type
- * None-retractable fixed position type

Construction

- * Box : Stainless steel 1.2t hair-line finished
- * Panel : STS304 2t

Consisting of

- * Oxyen, Nitrous-oxide, Air, Vacuum Outlet
- * Evacuation outlet (option)
- * Pneumatic drive control switch

MMK - CU - PU

"yy" Gas Outlet type
PU = Pin push button
OH = Ohmeda
OX = Oxequip
PB = Puritan Bennett

Ceiling Column

Ceiling Pendant System

Description

It's system to supply medical gas and sources of electricity through an external case.

First it makes a mold fixed and installed to concrete roof in the ceiling of OR and the mold has been adhered to an external case included devices (receptacle and check valve) to supply medical gas and sources of electricity to anesthetic machine and some equipments

This system is available in every direction and freely adjustable height. Also freely rotation of monitor shelf.

Practicality

- * Anesthesia department
- * Recovery room
- * Intensive care unit
- * Endoscope field
- * General surgery
- * Obstetrics & Gynecology
- * Emergency room

Integration

- * Basic arms and joints can be organized in various ways as shown in the picture.
- * All the joints can be rotated up 340 and have a break
- * There are two types of infusion holders-automatic type to move automatically up and down and manually operable type
- * Infusion pump is available on demand
- * Inclination of the vertical is adjusted automatically by the high precision sensor, mechanical devices, and computer.
- * Warning is given automatically if load over design limit detected.
- * LCD monitor can be fixed on both sides of the machine or any location when necessary.
- * CCD camera can control its direction and magnification by remote control.
- * Shelves, drawers, computer, keyboards, and so on can be installed.
- * Height adjustable table for documentation work
- * Built-in speaker for indoor broadcasting
- * Height of the machine is fixed or may be adjusted by electric motor.
- * Height of each board can be easily adjusted manually
- * There are many reels to organize electricity cable, detection sensor cables, and hoses.
- * Supply order : 110V, 220V, 380V, LAN, RF, USB, RGB, Telephone, Interphone, other signal data
- * Gas supply : O₂, N₂O, AIR, Co₂, AGSS, Suction other gas outlet.

Wall Outlet

CE 0120

Description

It's general system installed from one outlet to five outlets at wall side of OR, Treatment Room and general ward through safety device to use each gas smoothly supplied from central supply system of medical gas.

This system have structure that gas flows just to fix adapter in use and gas confirmly closes just to draw out it from outlet.

Also it's an impossible to mix different kinds of gases due to different structure of adapters and outlets by kind of gas.

It's a safe by double safety device, namely, check. Not only it's a convenient by module method for functional addition and maintenance but also it makes hospital more safe ward atmosphere by a beautiful apperance.

Multi Console System

Description

It's a general ward care system that equips electric power, medical oxygen, medical vacuum, personal reading light, nurse call on one panel to treat efficiently patients.

This system fixes and installs on wall side in a general ward to nurse and manage patients easily so that also offers more safe and efficient care circumstance to patients and medical staff.

Especially this system has been equipped with monitor shelf so that it has a benefit to more wide space utility.

Also beautiful design finished rounding makes to look better ward atmosphere.

Model No : MMK-MC-PU2-1172

Basic Construction

Main Frame : Aluminum profile 2t anodizing finished

Panel : Aluminum profile 2.t baked painting

Upper/Lower Cover : Aluminum profile 1.5t baked painting

Standard Length : Body - 1,172mm

Total Weight : 5.431Kg (4.634 Kg/m)

Nursery Educational Unit

Description

This system is for education to nurse which reconstructs console unit installed at the upper wall side of bed to offer an electric power and medical gas for patient treatment. As it's for education to nurse, this system takes the focus on more independent and free movement.

Model No : MEF22-NU-1500

Especially it helps an educational process more conveniently and efficiently that keeps a low noise below 40db without having an effect on human body badly in operation. Moreover small air compressor and vacuum pump equipped inside panel creates positive pressure and negative pressure for itself without and assistance of an external supply sources.

Various accessories have been installed to use the upper rail system and it includes built-in drawers, too. Besides not only it has a convenient movement but also it is proud of a very beautiful design and solid.

- * Construction durability with laminate panels.
- * Over 100 plastic laminate color selections to complement your room decor.
- * Available every application - service outlet can be optional fix as hospital requirement.
- * Installation is fast, simple, economical.

Desk Wall System

Description

Desk Wall System / Semi Wall Care Unit / Multi Service Station

To treat efficiently patients needed a intensive care in ICU, ER, Recovery Room, it's system that equips systematically medical assisting service including medical gas, electricity, grounding, lighting and adhesive system of medical devices.

Model No : MMK-SS-2200

As it's also an independent type in comparison with console system fixed and installed at wall side, it's of great advantage to an efficient space utility. Also maintenance is easy as module made.

- * Improve every patient room
- * Match individualized requirements and meet optional needs.
- * Construction durability with AL profile and laminate panels.
- * Over 100 plastic laminate color selections to complement your room decor.
- * Available every application - service outlet can be optional fix as hospital requirement.
- * Installation is fast, simple, economical.

Optional Accessory

B.P Basket / Utility Basket
Infusion pole / Nurse Call
Flowmeter with Humidifier / Wall Suction Unit

Description

The Flat wall's attractive, uncluttered appearance gives any room a neat, clean, appearance. Clean straight line design units available in any width or height to suit your patient service needs. Economical solution to patient care needs.

Flat Wall System

- * Improve every patient room
- * Match individualized requirements and meet optional needs.
- * Construction durability with AL profile and laminate panels.
- * Over 100 plastic laminate color selections to complement your room decor.
- * Available every application - service outlet can be optional fix as hospital requirement.

Optional Accessory

B.P Basket / Utility Basket
Infusion pole / Nurse Call
Flowmeter with Humidifier / Wall Suction Unit

Flowmeter w/Humidifier

MMK-FH-15

CE 0120

Description

With connecting to gas outlet, it's device to supply oxygen to patient as regulating artificial oxygen flow.

It has a merit not to be broken easily with strong durability and it's smooth surface treatment with polycarbonate glass materials, too.

Features

- * Bubble type Humidifier for Oxygen
- * Calibrate 3.5 Kg/Cm² (50PSIG) inlet pressure
- * Operating Rant : 0 ~ 15 LPM
- * Humidification vessel : Name capacity - 230ml / Use capacity : 100ml
(Low water level - 130ml, High water level - 230ml)
- * Solid brass body chrome plated for durability.
- * Control valve is back pressure compensated so flow accuracy is not effect by Restrictions caused by humidifier
- * Unbreakable polycarbonate bottle & Provides an audible alarm humidifier

Ohmeda

Oxequip

Puritan Bennett

Pin index

Regulator w/Flowmeter & Humidifier

MMK-RF-R1

Description

With connecting to portable oxygen cylinder, it's device to supply oxygen to patient as regulating artificial oxygen flow.

Features

Single-stage Oxygen pressure regulator with a flowmeter and humidifier.

- * Inlet Pressure : 150 Kg/Cm² (2134 PSIG)
- * Outlet Pressure : 3.0 Kg/Cm² (43 PSIG)
- * Outlet Flowrate : 0 ~ 15 Liter/Min
- * Remarks : Pressure gauge 250 Kg/Cm² (3556 PSIG)
- * Weight : 1.5 Kg

Wall Suction Unit

CE 0120

Description

It consists of suction regulator and suction container. With connecting to vacuum outlet of hospital and as regulating pressure properly, it's device to remove a foreign substance from patient.

Separating suction trap unit has an automatical opened and closed floating valve taking double protection function against a foreign substance.

And it endures not only high pressure of sterilizing disinfection but also informs a dangerous situation easily as alarm sound operated before foreign substance overflows.

Product Characteristic

- Use gas : Vacuum for medical care.
- Standard pressure : 600 mmHg
- Maximum pressure : 760 mmHg
- Noise : below 60db in 1m streets.
- * Lightweight construction
- * High impact plastic body
- * Easy to clean

Intensive Care Secondary Equipments

- Beautiful round design of the device.
- Applying unique anti-overflow and alarm system.
- Improved capability of battle and shorten height makes the device not be disturbed by medical bed.
- Hole-in-hose can be moved by patient location and it has a rack for clearing hose.

Three mode adjustment control

- REG : Be consecutive sucking to pressure adjusted.
- OFF : Sucking pressure block.
- FULL : The maximum sucking pressure which we are supplied.

Suction control knob

On / off, Increase / Decrease
Vacuum regulation range : 0 ~ 200mmHg

MMK-WC-A1400

- 4 Color coded gauge
- Integral bellows type Gauge
- Vacuum regulation range : 0 ~ 200mmHg
- Low : 0 ~ 80 mmHg
- Med : 80 ~ 120 mmHg
- High : 120 ~ 200 mmHg
- Full : 200 ~ Maximum vacuum

* One touch
suction regulator separation.

* One touch
Bottle cover separation.

* Handle

* Unbreakable polycarbonate
collection bottle (1400cc)

* Patient hose nipple.

* Bottle cover.

* Reliable anti
overflow floater

MMK-WC-D1400

- Vacuum regulation range : 0 ~ 760mmHg
- First display : 30 mmHg
- Power : Battery (AA size x 2ea / 3.6V / 2.4A / Parallel connection)
- Program loading time : Less than 5 seconds.
- Display racial a battery (BAT) becomes to LCD in case of battery voltage 3.4V or below.

Movable Kick Type Suction Unit

Description

With connecting to vacuum outlet, it's device to remove lots of foreign substance from a surgical patient. Its pressure can be used as regulating properly.

Features

- * Type : Movable Kick Type
- * Collection unit provide reliable over-flow protection
- * High vacuum pressure & Large storage.

Consisting of

- * suction gauge : 0 ~ 760mmHg
- * 8000cc glass collection bottle.
(Option : Unbreakable polycarbonate collection bottle)
- * On/Off valve & stan-by inlet cock valve.
- * Over-flow protector.
- * Mobile kick type bottle guide w/caster

Model No : MMK-MS-KI 8000

Movable Stand Type Suction Unit

Description

With connecting to vacuum outlet, it's device to remove lots of foreign substance from a surgical patient. Its pressure can be used as regulating properly.

Features

- * Type : Movable stand type
- * Versatile stand slide bracket for control of height
- * Collection unit provide reliable over-flow protection
- * Regulated vacuum range : 0 ~ 200mmHg w/full line
- * Two line selection control vacuum (Line 1 / Off / Line 2)
- * Full / Off / Regulated vacuum - one touch change
- * On/Off selector use without changing original setting

Consisting of

- * Suction regulator ass'y
- * 2 Line selectable block ass'y w/control valve
- * Suction bottle : 300cc Trap bottle (1 ea)
3,000cc Collection bottle (2 ~ 4 ea)
- * Vacuum hose (4 meter long)
- * Suction tubing 2.5 meter long
- * Slide bracket (2 ~ 4 ea)
- * vacuum cart : Stable 5 - caster w/locking wheels

Model No : MMK-MS-ST 6000

Thoracic Suction Unit

Description

Thoracic suction unit is a lightweight, compact unit used throughout the hospital for chest and mediastinal drainage.

The unit has a double chamber, which provides an adjustable vacuum of 0 to 25Cm H₂O and housed in double polycarbonate bottle.

One chamber is using a water manometer with water level, the other serving as the underwater seal for negative pressure control.

This unit is standardizing throughout the hospital from ER to Recovery, ICU where need the low pressure continuously.

Features

- * Type : Water manometer
- * Regulated vacuum range : 0 ~ 25Cm H₂O
- * Water level control button and drain valve.

Consisting of

- * Suction control knob for flowrate w/water chamber
- * Conductive tue ass'y
- * Wire basket for collection bottle
- * 1500cc collection bottle with over-flow protector

Model No : MMK-TS-25

Nurse Call System

This interactive emergency call system for hospitals consists of the composite medical communication devices to offer safety and convenience in large hospitals and senior homes.

This system was designed to exchange the communication between Nurse and patient with Master station and sub station by data communication system. This system was composed with master station which can control and display in the system and Power controller, and the sub station was composed with 4 wire type and It can be covered maximum 32 ea sub station from 1 mater station, and It can be installed the presence switch, emergency switch and corridor light.

Master Receiver

It is master receiver and it can receive from everywhere like wards, toilet, shower room etc.

Model No : JNS-4CM

- Call and talk to wards
- Sending event from wards
- Speed dial input function for 60 wards
- "16 rooms of public toilets (emergency function)"
- Call and talk to other receiver
- 1000 series nurse waiting room receiver.

Central Controller

It is applied new type of Stored Program Control by micro processor. Controlling Main receiver, all nurse call system function can control. All the functions, operating modes are localized by the card is easy to install and maintain

Model No : JNS-PSM

- 1000series main controller
- "16 rooms of public toilets (emergency function)"
- Max 29 units of JNS-1050M (Master station) communication
- 5 units of JNS-1050S(Sub station) are connectable to 1 unit of Master station
- Compatible JNS-1060 (Master consol) and TP-90AN
- Compatible guiding light .

Nurse Call Sub Station

It is Nurse call device have standard feature, easy installation and easy operation that can be used as substitution.

Model No : JNS-4CS

- Call and talk to JNS-4CM(Master consol)
- Extension JNS-4CS
- 1 unit of each toilet emergency S/W, Presence S/W, Showerroom emergency S/W and Corridor light installation available

Call Cord

It is connected substation attached in the ward and it helps to call the nurse in lying state.

Model No : CC-200

- Call cord
- It is for serious patient
- Special cable is applied to prevent sagging
- Easy attach and operation using connector
- Clip helps to fix at seat
- Paging cord
- Compatible with Sub station like JNS-4CS and call emergency

Corridor Light

It is installed near entrance of ward and when patients call the nurse or doctor it is used to check the ward.

Model No : CL-302C

- Color adjustable
- Good appearance
- Easy installation
- Each different lamp display is available for call, presence, emergency call, medical call etc

Presence Switch

This unit display using corridor light that doctors or nurses on their rounds were detected paging signal and in the patient care.

Model No : PB-500

- Install inside of wards wall
- Front pannel is specially surface treated and it make good appearance
- Presence switch
- Compatible with JNS-4 wired/ 1000 series
- 2 wired non polarity dry contact type

Emergency Paging Switch (Bath Room)

Patients in the event of emergency in toilet send signal to nurse waiting room and coridor light pressing emergency switch wich is attached to the wall.

Model No : ES-400

- Toilet emergency switch
- Anti-corrosion by waterproof
- Both pull and push type
- Compatible with JNS-4 wired/ 1000 series
- 2 wired non polarity dry contact type
- Compatible with CL-302

Emergency Paging Switch (Shower Room)

Patients in the event of emergency in shower room send signal to nurse waiting room and coridor light pressing emergency switch wich is attached to the wall.

Model No : ES-410

- Anti-corrosion by waterproof
- Shower room emergency switch
- Compatible with JNS-4 wired/ 1000 series
- 2 wired non polarity dry contact type

Ceiling Speaker

The speaker can be used inside and outside together and matching transformer built-in type

Model No : SP-630

- Nominal Power : 3W
- Impedance : Com / 3.3kΩ/5kΩ/10kΩ
- Frequency Response : 180Hz~13KHz
- Sensitivity (1m/1w) : 98dB
- Weight : 650g
- Outer Dimension (mm) : Ø230×150(D)

Wired Intercom

Wired Intercom High power wired intercom with function of lamp off upon receiving call/hands-free type (Non-polarity)

Model No : PI-10LN

- Master Unit : PI-10LN/ 20LN/ 30LN
- Power Consumption: 180mA
- Communication Distance: 2000m/50mm
- Power Supply: AC 100~240V / 50 , DC 24V
- Wiring: Individual 2 wires (Non-polarity)

OR Interphone - Master Receiver

Surgery room Interphone system is designed to call and receive the necessary support from anesthetic room or waiting room not using doctor and nurse hands during operation

Model No : JNS-12

- Sergerly room master consol
- Call and talk to JNS-101

OR Inter Phone - Sub Station

This device is designed for doctor or nurse under opeation to call and receive the necessary support from anesthetic room or waiting room using their elbow.

Model No : DR-6KO

- Talk to 6 units of JNS-360
- compatible with FS-600 (CALL)
- Substation for surgery room

OR Inter Phone - Foot Switch

Surgery room Interphone system is designed to call and receive the necessary support from anesthetic room or waiting room not using doctor and nurse hands during operation.

Model No : FS-600

- It is installed bottom of the wall (above the ground 30cm) and doctor and nurse call and talk to nurse waiting room using kicking(Foot) during operation
- Operating Room Inter Phone(Foot)
- Compatible with DR-6KO and call receiver
- Call and talk using kicking(Foot) during operation

OR Inter Phone - Arm Switch

This device is designed for doctor or nurse under opeation to call and receive the necessary support from anesthetic room or waiting room using their elbow.

Model No : AS-100

- Installation on the surgery room wall It is installed surgery room wall above the floor (150cm or less) and call surgery waiting room using elbow or hand by doctor or nurse under opeation
- Call and talk using elbow in surgery room
- Substation for surgery room
